NORTH CAROLINA’S COASTAL HABITAT PROTECTION PLAN
2013 - 2014
ANNUAL REPORT

TO THE
ENVIRONMENTAL REVIEW COMMISSION
AND THE
JOINT LEGISLATIVE COMMISSION ON GOVERNMENTAL OPERATIONS
OF THE
NORTH CAROLINA GENERAL ASSEMBLY
FROM
NORTH CAROLINA DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

September 2014
North Carolina’s Coastal Habitat Protection Plan (CHPP), mandated by the 1997 Fisheries Reform Act and drafted by Department of Environment and Natural Resources (DENR) staff, was adopted in 2004 by the NC Environmental Management Commission, Coastal Resources Commission, and Marine Fisheries Commission. Following adoption, DENR developed two-year implementation plans in 2005, 2007, 2009, and 2011. These plans detailed specific steps on which agencies agreed to focus during those timeframes. The CHPP Steering Committee, a subset of commissioners from the CRC, EMC, and MFC, leads in setting implementation priorities. Implementation progress and accomplishments have been reported annually since 2006, through the CHPP Annual Report.

Implementation Progress

The 2013-2014 reporting year was a time of transition for the CHPP planning process due to reorganization of several DENR divisions and the restructuring of the associated commissions. Because of this, the CHPP Steering Committee was never fully appointed by the commissions, and DENR agencies continued to work on implementation actions in the 2011-2013 plan, rather than develop a 2013-2015 plan.

Significant work has occurred this past year with regard to the identification of Strategic Habitat Areas in the White Oak River Basin (SHA Region 3). The primary lead agency for this work is the Division of Marine Fisheries, with significant assistance from staff of the Albemarle-Pamlico National Estuary Partnership (APNEP), other DENR divisions, and universities. The identification of a subset of strategically located, high quality coastal habitats is an important non-regulatory planning tool for resource managers, local government, and conservation groups.

During the 2013-2014 year, APNEP, Division of Marine Fisheries (DMF), National Oceanic and Atmospheric Administration (NOAA), and the Division of Transportation (DOT) worked together to photograph the extent of Submerged Aquatic Vegetation (SAV) in eastern portions of Albemarle-Pamlico National Estuary (Roanoke Sound to Bogue Sound). These images will be compared to previous images taken in 2008 and 2009 to review the extent of change in this significant habitat emphasized in the CHPP.

A Low Impact Development (LID) Summit was held in Raleigh this past year, attended by close to 300 people. The Summit was led by the Division of Water Resources (DWR) in conjunction with the NC Coastal Federation (NCCF) and NC State University. Funding and planning staff for the Summit were provided by APNEP. The Summit promoted LID as an environmentally sound way to develop, and presented a new computer model, Stormwater EZ, which can be used state-wide to help design LID projects and help secure the necessary permits.

To encourage alternatives to vertical shoreline stabilization, Division of Coastal Management (DCM) staff drafted a Living Shoreline Strategy with input from other DENR division representatives, which identifies six short-term and four long-term actions for Department consideration. The document summarizes previous and ongoing estuarine shoreline stabilization research in the state, identifies information gaps, highlights the need for continued staff engagement and public awareness, and investigates potential grant programs or cost reductions. The strategy also recognizes the need to promote other living shoreline strategies (other than riprap sills), to develop training programs/certification for marine contractors, and to partner with groups such as the military to increase the number of demonstration sites. The draft strategy will be presented to the CHPP Steering Committee and DCM will continue working on specifications within the strategy.
2015 Review and Revision

The 5-year review and revision, required under the 1997 Fisheries Reform Act, is underway. The current plan is to streamline the document, moving the “Threats” sections from individual chapters to a chapter of their own, consolidating threat information and focusing on priority issues, as directed by DENR and the CHPP Steering Committee. This should create a more succinct document, eliminating redundancies. DMF staff has been working on draft edits for several months, and anticipates that staff from other agencies will be actively involved in the coming months.

The Next Step

Recently, the Department has requested the CHPP process and direction be re-evaluated and modified if necessary. The goal is to ensure that the plan remains vital and relevant in sustaining our state’s natural resources, and that it supports the department’s priorities and mission statement. The suggested changes are attached. Once members of the CHPP Steering Committee are assigned, they will meet to discuss habitat and water quality issues of concern to the DENR divisions and provide input on the 2015 CHPP update.
North Carolina Coastal Habitat Protection Plan
Purpose, Process, and Direction

Purpose of the Plan
The 1997 Fisheries Reform Act (SL 1997-400) mandated that a NC Coastal Habitat Protection Plan (CHPP) be developed by the NC Department of Environment and Natural Resources (DENR) for the purpose of long term enhancement of coastal fisheries through the protection, enhancement, and restoration of coastal fish habitat. This legislation was initiated because of widespread water quality issues such as increasing algal blooms, fish kills, oyster disease, and shellfish harvest closures.

CHPP Accomplishments
Through an inter-commission approach, the CHPP has been successful in implementing a number of recommendations, with the majority of the plan actions being non-regulatory in nature. Accomplishments include:

- Increased outreach and education
- Improved communication between agencies
- New mapping and research
- Oyster and fish passage restoration
- Compliance with existing regulations

Positions and funding to undertake CHPP recommendations have been obtained through past appropriations and grants. The most notable accomplishment of the CHPP process has been the improved interagency and inter-commission communication and coordination, which improves effectiveness and efficiency of processes within DENR.

CHPP Process
The law specifies that the CHPP include a description of North Carolina’s coastal fish habitats, their ecological functions, value, status, and threats, as well as recommended actions to protect, enhance, and restore fish habitat. The focus of initial efforts involved developing a process and gathering the necessary data by which the Marine Fisheries, Coastal Resources, and Environmental Management Commissions could make informed recommendations. The result was a lengthy document that compiled the results of a large amount of relevant research on coastal habitats. Biennial implementation plans were then developed based on recommendations of the Steering Committee. The initial plan was completed and approved in 2005 and updated in 2010. As the next five-year update is scheduled for completion in 2015, there is an opportunity to re-evaluate the current process and plan structure in an effort to streamline and enhance the program.

Changes Proposed for Continued Success
After 10 years of implementation, DENR staff evaluated the CHPP processes and has several suggested changes to allow continued implementation of the program while achieving improved efficiencies. The proposed changes would not require a legislative action. We propose to realign the CHPP updates to be similar to the existing DMF Fishery Management Plan (FMP) amendment process. Both the Fishery Management and CHPP plans are required to be reviewed and updated at least every five years. In an FMP amendment (or update), staff focus on the development of individual “information papers” that
assess specific relevant issues, with only necessary updates to the background text. The issues are identified by staff on the Plan Development Team or an Advisory Committee.

1) **Focus on the Issues.** The CHPP Team, consisting of staff from the Divisions of Marine Fisheries, Coastal Management and Water Resources, will identify emerging habitat issues. Involvement from the Division of Energy, Mineral, and Land Resources will be considered since that division now oversees stormwater management. With input from the CHPP Steering Committee, which is comprised of two commissioners from each commission, staff will develop information papers which will be appended to the previous version of the CHPP. Updates to the background text will be limited to that necessary to adequately support information papers.

2) **Streamline.** The plan’s background text will be streamlined to make the document more reader friendly. Once completed, the bulk of the information now in the CHPP will serve as a source document and require limited modification with subsequent plan updates.

3) **Fewer meetings.** Commission involvement (CHPP Steering Committee) will be reduced to annual meetings instead of the quarterly or semi-annual meetings. The CHPP Steering Committee may meet more regularly during plan amendments. Status reports on implementation will be provided to the CHPP Steering Committee at their annual meeting. Reports on implementation progress may optionally be presented to the full commissions to further engage and educate commissioners on environmental issues.

4) **Fewer reports.** CHPP Implementation Plans will be restricted to issues addressed in CHPP amendments and will be updated on five year cycles to coincide with the plan update. Like Fishery Management Plans, an amendment can be initiated sooner than five years if it is determined that a habitat issue needs to be addressed before the five year update.

5) **Simplified review and reporting process.** The Fisheries Reform Act requires that five year plans be reviewed by the commissions and an annual report on progress in plan development and implementation be submitted to the Joint Legislative Commission on Seafood and Aquaculture (now sent to the Legislative Commission on Governmental Operations) and the Environmental Review Commission. To simplify, amendment plans and annual reports will be reviewed and approved by the CHPP Steering Committee, rather than the full commissions. However, CHPP Steering Committee members may choose to have the plan and associated recommendations reviewed by their full commissions to allow them the opportunity to provide input on the plan recommendations prior to their finalization.

The vision for the Coastal Habitat Protection Program is to continue to use the plan and process as a tool to enhance communication across the DENR divisions and commissions and to improve effectiveness in sustaining our state’s natural resources.
