Subject: Falls Lake Cleanup

First I must say that I am appalled that the powers that be have let this beautiful lake get to the condition that it is presently in. Not to mention that it is a source of drinking water for a multitude of people. I am from upstate New York where there are the most pristine lakes that supply New York City with the best quality water in the world, and some of the lakes are over 100 miles from New York City. They started over 100 years ago to construct one of the largest water systems in the world. They had the foresight to see into the future and to this day they still strive to improve the system.

(1) They do not allow motor craft of any sort.
(2) The boats that are at the lakes are row boats for fishing only and they cannot be moved once they are at a lake.
(3) There is no swimming allowed in any of the numerous lakes.
(4) They have constructed sewer systems in the areas that surround the lakes so no sewage can get into the water by any means.

I implore you to study what New York City has done it insure safe drinking water for the people.

There are numerous publications on the construction and the maintenance of the New York City Aqueduct system I recommend that you study some of the ways they have improved the system
